

You will use this Weather Teaching Tool in many ways during this theme. One of the main ways you will use it is to create a Weather Graph. To make the graph, draw a simple graph on a large piece of chart paper. Print ascending numbers on the left-hand side of the graph and glue one weather piece for each type of weather across the bottom. Each day, children will attach a piece to the graph that best depicts the day's weather. At the end of the theme, use the graph to determine which type of weather occurred the most, the least, the same, etc.

The Teaching Guide will give you other ideas on how you can use these pieces but feel free to add your own ideas!
